

Lab Experiment 5 : WAP to Demonstrate the Usage of This Keyword

```
class Employee {  
  
    int Id;  
    String Name;  
  
    // 1. Using this to refer current class instance variables  
    Employee(int Id, String Name) {  
        this.Id = Id;  
        this.Name = Name;  
    }  
  
    // 2. Using this to call another constructor  
    Employee() {  
        this(5, "abc");  
    }  
  
    // 3. Using this to call current class method  
    void printDetails() {  
        System.out.println("Employee ID: " + Id + ", Name: " + Name);  
    }  
  
    void callPrint() {  
        this.printDetails();  
    }  
}
```

// 4. Using this to pass current object as parameter

```
void receive(Employee e) {  
    System.out.println("Received Employee Name: " + e.Name);  
}
```

```
void send() {  
    receive(this);  
}
```

// 5. Using this to return current object

```
Employee returnObject() {  
    return this;  
}  
}
```

```
public class ThisKeywordDemo {  
    public static void main(String[] args) {
```

```
        // Constructor chaining
```

```
        Employee e1 = new Employee();
```

```
        e1.callPrint();
```

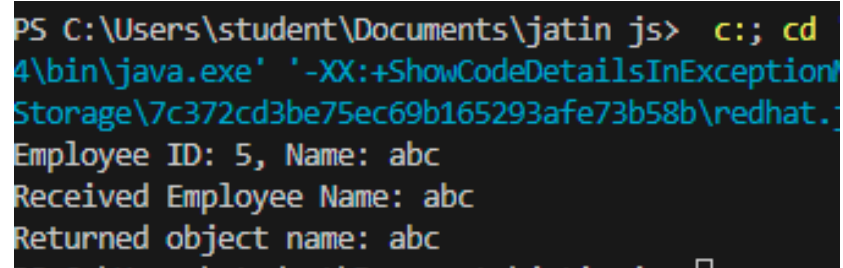

```
        e1.send();
```

```
        // Returning current object
```

```
        Employee e2 = e1.returnObject();
```

```
        System.out.println("Returned object name: " + e2.Name);
    }
}
```

Output:

```
PS C:\Users\student\Documents\jatin js> c::; cd
4\bin\java.exe' '-XX:+ShowCodeDetailsInException
Storage\7c372cd3be75ec69b165293afe73b58b\redhat.
Employee ID: 5, Name: abc
Received Employee Name: abc
Returned object name: abc
```
